

NIH SBIR/STTR General Overview – Proposal Preparation

Presented by
Jo Anne Goodnight
Independent Consultant
*(Former NIH SBIR/STTR Program
Manager)*

joanne.goodnight@gmail.com

January 11, 2022

***Grant Writing
for Success***

My Background

- 25+ years in the Federal Government
 - NIH: SBIR/STTR Program Manager; Researcher
 - Office of the Director
 - National Cancer Institute
 - FDA
 - USDA
 - Interagency policies/initiatives (DOD, NSF, DOE, NASA, DHS, etc.)
- 10+ years in non-profit and for-profit environments
 - Jackson Laboratory, Director of Sponsored Research
 - Small TX biotech company, VP Research
 - Small FL-based consulting company, Program Manager
- Scientific Background
 - Microbiology and immunology
 - Cancer genetics

Today's Objectives

- **SBIR/STTR Refresher**
- **NIH SBIR/STTR Program Review**
- **Key Forms G Items**
- **NIH SBIR/STTR Application Elements**
- **Review Process (in brief)**
- **Communicating with NIH**
- **Resources**
- **Answer Your Questions!**

Congessionally Mandated Programs

3.2%

SMALL BUSINESS INNOVATION RESEARCH (SBIR) PROGRAM

Set-aside program for small business concerns to engage in federal R&D -- with potential for commercialization

~\$3.2 billion annually across all Federal Agencies

0.45%

SMALL BUSINESS TECHNOLOGY TRANSFER (STTR) PROGRAM

Set-aside program to facilitate cooperative R&D between small business concerns and US research institutions -- with potential for commercialization

~\$450 million annually across 5 Federal agencies

**\$1.2 Billion Dedicated SBIR-STTR Funding
via Set-aside from NIH's R&D Budget**

SBIR/STTR Program Goals

- Stimulate technological **innovation**
- Meet federal **research and development needs**
- Increase private-sector **commercialization** of innovation derived from federal research and development funding
- Foster and encourage **participation** in innovation and entrepreneurship by women and socially/economically disadvantaged individuals
- Foster **technology transfer** through cooperative R&D between small businesses and research institutions (STTR)

SBIR - STTR Critical Differences

	SBIR	STTR
Partnering Requirement	Permits partnering	Requires a non-profit research institution partner (e.g., university)
Work Requirement	Guidelines: May outsource 33% (Phase I) 50% (Phase II)	Minimum Work Requirements: 40% small business 30% research institution partner
Principal Investigator	Primary employment (>50%) must be with the small business	PI may be employed by <u>either</u> the research institution partner or small business

Award is always made to the small business

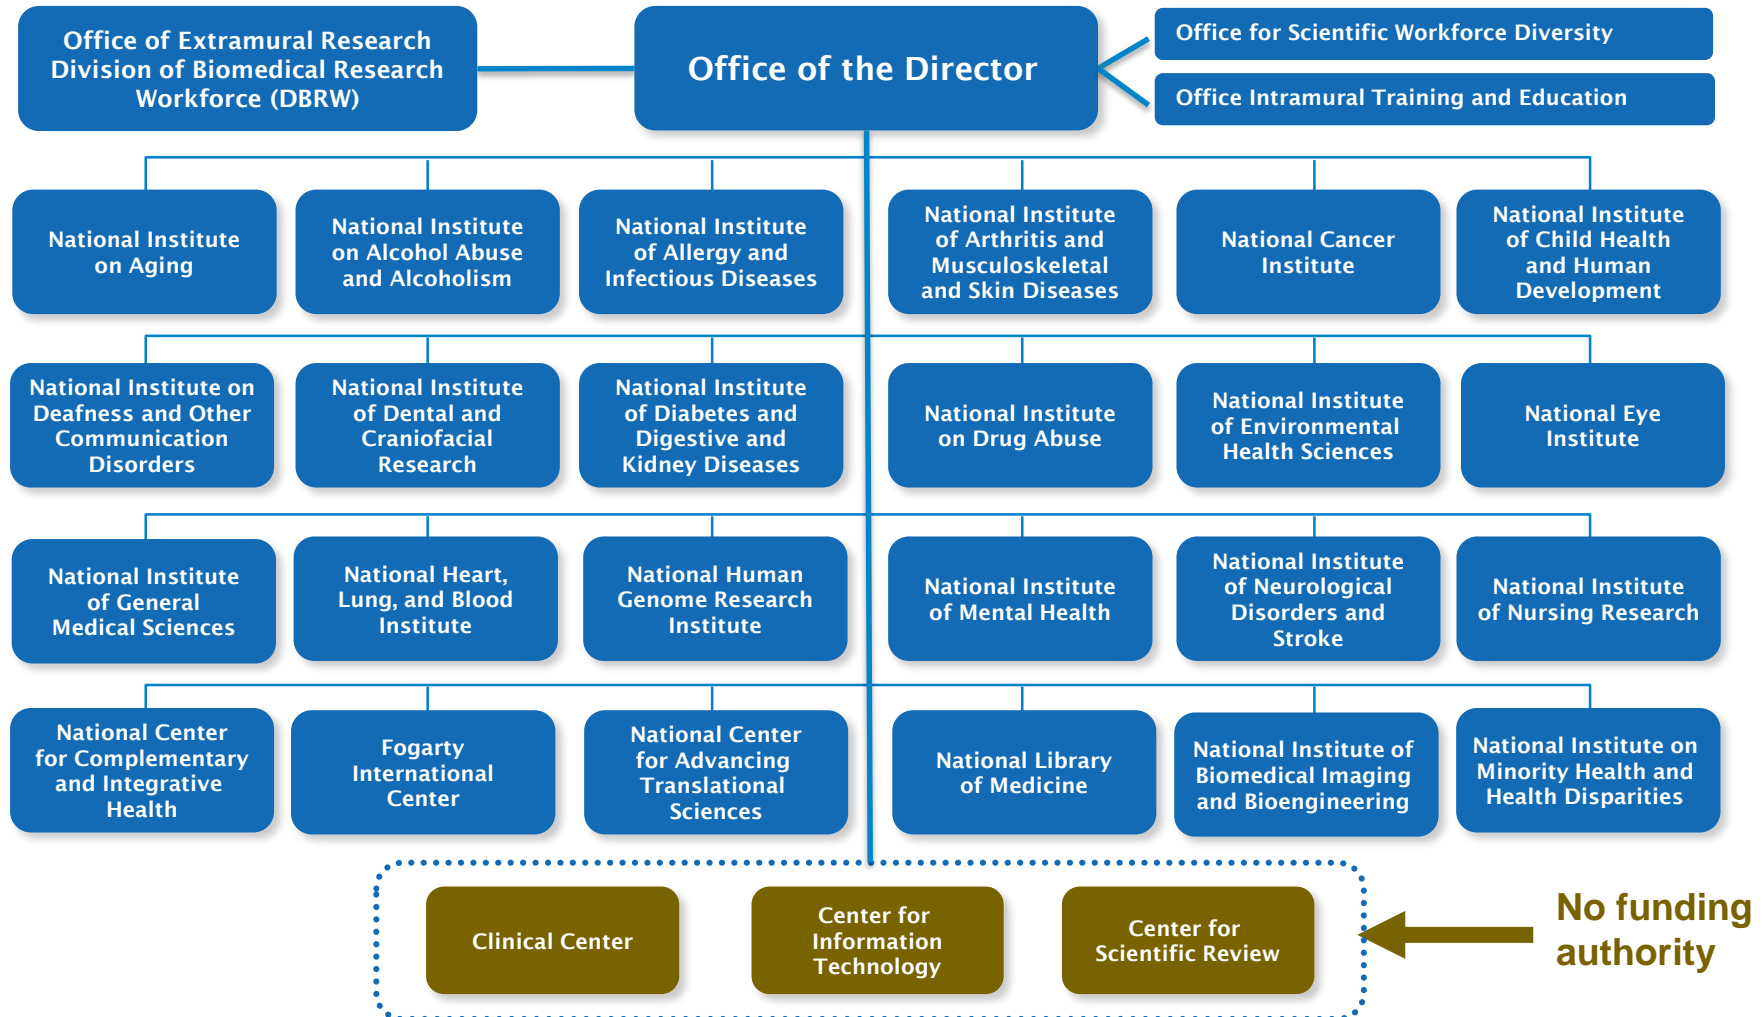

NIH Mission

*To seek fundamental knowledge about the nature and behavior of living systems and the **application of that knowledge to enhance health, lengthen life, and reduce illness and disability.***

The Small Business Program helps NIH accelerate discoveries from bench to bedside

National Institutes of Health

ONE NIH, 27 Cultures

Each IC has its own

- **mission**
- **budget (and success rates)**
- **activities**
- **way of doing business**

**You are in the right place to learn the
myriad nuances!**

NIH SBIR/STTR Budget Allocations FY2020

3.2% SBIR \$1 billion
0.45% STTR \$146 million
Total FY20 \$1.2 billion

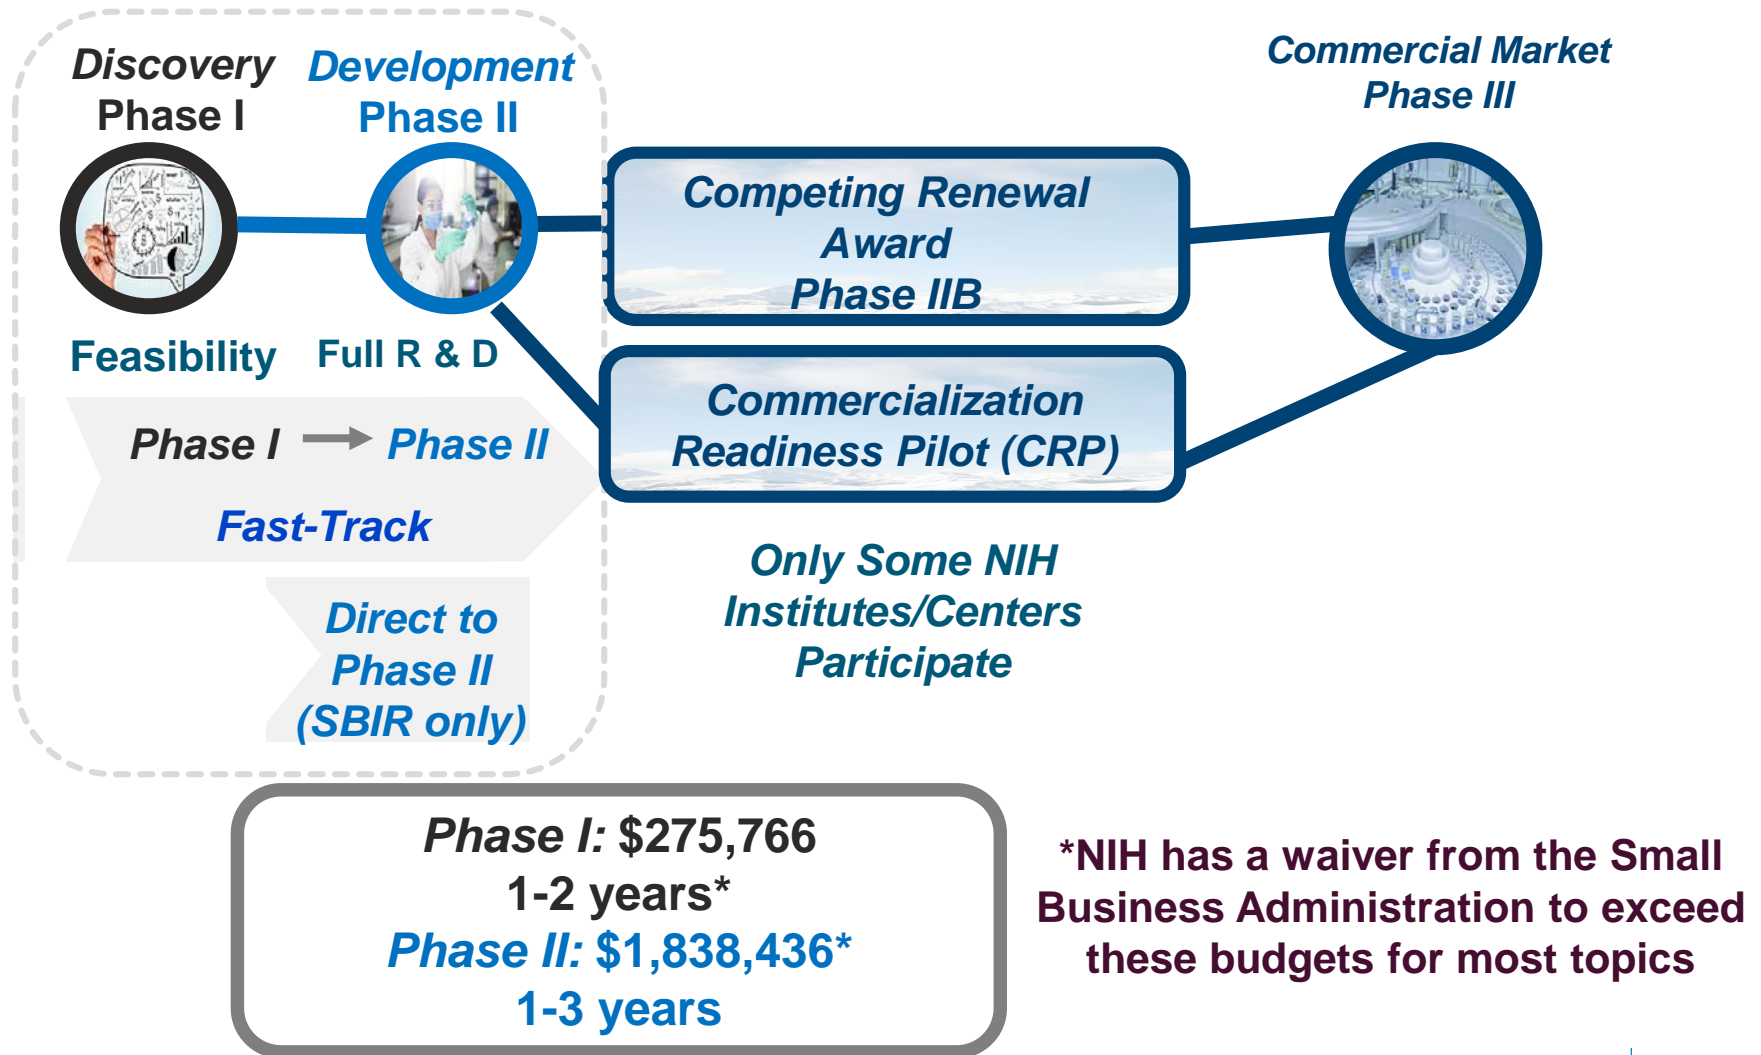

NIH-Wide SBIR/STTR Success Rates

*Excludes applications and awards issued using supplemental Coronavirus (COVID-19) appropriations.

Fiscal Year	SBIR/STTR	Phase ¹	Number of Applications Reviewed	Number of Applications Awarded	Success Rate ²	Total Funding ³
2020	SBIR	Phase I	3,620	450	12.4%	\$122,375,161
2020	SBIR	Fast Track	637	108	17.0%	\$45,233,516
2020	SBIR	Total Phase II	1,260	324	25.7%	\$302,763,267
2020	SBIR	Regular Phase II	570	174	30.5%	\$158,434,872
2020	SBIR	Direct Phase II	588	112	19.0%	\$103,621,112
2020	SBIR	Phase IIB	102	38	37.3%	\$40,707,283

2020	STTR	Phase I	1,066	186	17.4%	\$52,804,650
2020	STTR	Fast Track	106	20	18.9%	\$7,033,717
2020	STTR	Total Phase II	99	27	27.3%	\$23,102,158
2020	STTR	Regular Phase II	95	26	27.4%	\$22,102,158
2020	STTR	Phase IIB	4	1	25.0%	\$1,000,000
2020	FY TOTAL		6,841	1,121	16.4%	\$557,369,913

NIH SBIR/STTR Phases

NIH Small Business Program Phases

Small Business Program Phases	Description
Phase I	A Phase I award helps you focus on the feasibility, technical merit, and commercial potential of your research project.
Phase II	A Phase II award lets you continue the research and development efforts initiated in Phase I. Once you've reached your Phase I milestones, you can apply for a Phase II award, even before the end of the Phase II award. You may submit your application for a Phase II award up to six receipt dates after your Phase I budget period expires.
Fast-Track	The fast-track process allows you to submit both Phase I and Phase II in one application for review. The Fast-Track mechanism can minimize the funding gap between phases but requires a fully developed Phase II application/plan at the time of submission.
Direct to Phase II (SBIR Only)	If your project has already demonstrated feasibility but you have not received a Phase I SBIR or STTR, you can apply for a Direct to Phase II award and bypass Phase I.
Phase IIB More info here	Some NIH Institutes and Centers offer Phase IIB awards for Phase II projects that require extraordinary time and effort beyond the standard Phase II period of 2 years. See the Phase IIB FAQs for more information.
Commercialization Readiness Pilot (CRP) Program More info here	The Commercialization Readiness Pilot (CRP) Program provides awarded Phase II and Phase IIB small businesses technical assistance and funding for late-stage development. Read more about the CRP program .

SMALL BUSINESS FUNDING

24 NIH Institutes and Centers along with CDC, FDA, and ACL fund scientists & entrepreneurs working to bring their discoveries to patients.

For a small business with a brilliant new idea in the life sciences, a funding infusion can do wonders to help translate that concept into reality. Did you know that the NIH small business programs are the largest source of early-stage capital for the life sciences in the U.S.? These programs set aside over \$1.2 billion non-dilutive funds every year -- specifically to support small business research and development.

Frequently Asked Questions (FAQs)

Types of NIH Funding Opportunity Announcements (FOA)

Type of FOA	Description
Parent Announcements	<ul style="list-style-type: none">• Broad FOAs allowing applicants to submit “investigator initiated” or “unsolicited” research ideas to a specific activity code (e.g., R01, R03)• Most applications to NIH = investigator initiated• Usually ongoing (3 years); standard receipt dates
Requests for Applications (RFA)	<ul style="list-style-type: none">• Identifies specific scientific areas, amt of set-aside funds, anticipated # of awards• Usually, single receipt date• IC usually convenes review panel
Program Announcements (PA, PAR, PAS)	<ul style="list-style-type: none">• Highlights specific, high-priority areas of interest• PAS: PA with set aside funds; PAR: has a special receipt, referral and/or review considerations• Usually ongoing (3 years)• Often use standard receipt dates• Most NIH ICs participate

NIH/CDC/FDA SBIR/STTR Solicitations and Due Dates

Standard Due Dates: Jan 5, April 5, Sept 5

- [PA-21-259](#) -- PHS 2021-2 Omnibus Solicitation of the NIH, CDC and FDA for SBIR Grant Applications (Parent SBIR [R43/R44] Clinical Trial Not Allowed)

SBIR/STTR Topics

- **Search the Solicitation (e.g., digital health)**
 - **National Cancer Institute (NCI):** Major NCI SBIR/STTR Portfolio Areas:
 - Therapeutics (e.g., Small Molecules, Biologics, Radiomodulators, Cell-based Therapies)
 - In Vitro and In Vivo Diagnostics (e.g., Companion Diagnostics Prognostic Technologies)
 - Imaging Technologies (e.g., Agents, Devices, Image-Guided Interventions)
 - Devices for Cancer Therapy (e.g., Interventional Devices, Surgical, and Radiation and Ablative Therapies, Hospital Devices)
 - Agents and Technologies for Cancer Prevention
 - Technologies for Cancer Control (e.g., Behavioral Health Interventions, Tools for Genetic, Epidemiologic, Behavioral, Social, and/or Surveillance Cancer Research)
 - Tools for Cancer Biology Research
 - Digital Health Tools and Software Platform for Cancer Related Technologies

SBIR/STTR Topics

- **Search the Solicitation (e.g., digital health)**
 - **National Institute on Drug Abuse (NIDA) - Topics of Special Interest**
 - Biomarker Development for Substance Use Disorders (SUD)
 - Biomedical Robotic Cloud Labs
 - Substance Use Disorder (SUD) Drug Discovery and Development
 - Technologies for Safe and Controlled Methadone Dispensing for Use at Home
 - FDA-regulated Medical Devices for Substance Use Disorder (SUD)
 - Technological Approaches to Address Stigma Associated with Substance Use Disorders (SUD)
 - Digital Health Technologies to Address the Social Determinants of Health in context of Substance Use Disorders (SUD)
 - New technological approaches for the Investigation, Diagnosis, and Certification of Deaths Related to Drug Overdose

SBIR/STTR Topics

- **Search the Solicitation (e.g., natural products)**
 - **National Center for Complementary and Integrative Health (NCCIH)**

Non-Clinical Trials Topics: Natural Products (including botanicals, herbs, probiotics, prebiotics, dietary supplements, special medicinal diets, and microbiome-/microbial-based therapeutics):
 - Development and validation of technologies for standardization and characterization of biologically active ingredients in natural products
 - Development and validation of technologies for taxonomic identification of botanical raw materials or detection of adulterants
 - Development and validation of technologies for the identification and characterization of bioactive metabolites derived from oral consumption of natural products
 - Development and validation of methods for the sustainable production of low-yield natural products of commercial interest
 - Development of novel analytical tools and technologies to study the microbiome, including its composition, genetics, and bioactivity, that can help clarify associations between the human microbiome and brain function and health
 - Development of gut microbiome monitoring assays for validating safety and functional analysis of genomic and microbiota interactions
 - Development of complementary and integrative therapeutic approaches to modify and balance the gut microbiota in healthy populations and individuals with disrupted microbiota and related diseases

Electronic Submission

SBIR/STTR grant applications **and** SBIR contract proposals must be submitted **electronically**.

REQUIRED REGISTRATIONS

- DUNS Number / UEI (unique entity identifier)
- System for Award Management (SAM)
- Grants.gov (Company)
- eRA Commons (Company and all PD/PIs)
- SBA Company Registry at SBIR.gov
- Grants submit via ASSIST or Grants.gov Workspace
- For contracts, submit proposals with [electronic Contract Proposal Submission](#) (eCPS) website

NIH UEI Implementation

- For applications due on or after January 25, 2022, applicants **must** have a UEI at the time of application submission. UEI replaces DUNS on all FORMS-G application forms and packages.
- All entities currently registered in SAM have automatically been issued a UEI.
 - Note: DUNS still required for new registrants prior to April 2022. UEI will be issued as part of registration.
- Effective October 2021
 - eRA pulling UEI data for organizations in eRA Commons registered in SAM.gov. No action is required by the entity.
- Organizations will see their UEI in eRA Commons IPF early in January 2022.

Electronic Submission

- Be sure to use the correct Forms Set!
- NIH "FORMS-G" Grant Application Forms and Instructions must be used for Due Dates on or after January 25, 2022

Annotated Form Set for NIH Grant Applications
FORMS G Series

Key Changes in Forms G update

- Transition from DUNS to a unique entity identifier (UEI) issued by SAM.gov as the official identifier for doing business with the federal government ([NOT-OD-21-170.](#)) See [Goodbye DUNS, Hello UEI.](#)
- Updated biosketch and other support format pages ([NOT-OD-21-110.](#))
- Added question regarding Technical and Business Assistance (TABAs) to the SBIR/STTR Information form ([NOT-OD-21-082.](#))
- Updated country and state dropdown lists across all forms.
- Increased character limit to 100 characters for “Department” and “Division” fields.
- Expanded requirement for a Commons ID to all senior/key personnel ([NOT-OD-21-109.](#))
- Increased number of “Other” direct cost budget lines from 3 to 10.

Description

Abstract Text

Project Abstract In a real-world clinical setting, busy oncologists lack the time for investigative case analysis across all feasible treatment options, frequently updated treatment guidelines and payor specific requirements. This results in sub-optimal decision making, incomplete pre-authorization (pre-auth) documentation, and problems with reimbursement. Overall, this increases medical costs and payment deficits within oncology. For example, pre-auth inefficiencies are estimated to add \$83,000 a year per physician to healthcare costs, which is \$1.1 billion annually in oncology alone. To devise a treatment plan, oncologists reference National Comprehensive Cancer Network Guidelines® (NCCN), other clinical society standards, and payor specific requirements in the context of a patient's medical history, tumor characteristics, and phase of treatment. One of the most used oncology treatment guidelines referenced by oncologists and adhered to by most payors is the National Comprehensive Cancer Network (NCCN) Guidelines®. These guidelines are presented as a schema that span 100s of pages. A technology driven clinical decision support (CDS) system could be employed to address the need to streamline treatment guideline analysis, payor rules review, and treatment decision documentation for reduced overall cost to oncology practices. This proposal focuses on developing an innovative and first-of-a-kind technology for CDS using non-small cell lung cancer (NSCLC) as the initial test case and incorporating NCCN Guidelines, general payor specific requirements and patient data overlaid to compute feasible treatment pathways. The team proposes the following Phase I Specific Aims: Aim 1: Develop a graph-based mathematical model and visual presentation of NSCLC NCCN treatment guidelines with generalized payor specific requirements. Develop a visually interactive graph-based representation of NCCN Guidelines®. Modeling guidelines as a visual graph (nodes and arcs) will enable oncologists to identify the optimal treatment pathway for their patients. Aim 2: Build an analytics engine that highlights the NCCN graph model with feasible treatment options given the patient's case details and common payor requirements. Use an opensource tool to create synthetic patient data and common payor constraints with an oncologist and health plan experts. Develop a library of graph traversal algorithms to overlay and visualize the patient data in a visual user interface. Aim 3: Execute, validate and test a proof-of-concept CDS workflow using OncoPath. Run the complete end-to-end CDS workflow with documentation of patient details, NCCN guideline, payor requirements and treatment decision using synthetic patient data and payor constraints generated in Aim 2. OncoPath will enable an efficient, oncologist-friendly approach to treatment decisions and documentation, subsequently benefitting the patient and decreasing oncology cost. Phase II will deploy a real-time instance of OncoPath in a single thoracic oncology practice for integrated workflow and time savings validation.

Problem

Background

Significance

**Methods/
Approach**

Aims

**Anticipated
Outcomes**

Project Narrative and Example

- 2-3 sentences
- Communicate public health relevance of the project
- Use plain language understandable by general audience
- Describe how the research would contribute to the fundamental knowledge about the nature and behavior of living systems, and/or the application of that knowledge to enhance health, lengthen life, and reduce illness/disability.
- If application is funded, this becomes posted in NIH RePORTER

Public Health Relevance Statement

Project Narrative In a real-world clinical setting, busy oncologists lack the time for investigative case analysis across all feasible treatment options, frequently updated treatment guidelines and payor specific requirements. This results in sub-optimal decision making, incomplete pre-authorization (pre-auth) documentation, and problems with reimbursement. Overall, this increases medical costs and payment deficits within oncology. To address this unmet need, this proposal aims to build OncoPath, a prototype tool in non-small cell lung cancer providing a first-of-a-kind visual representation of the NCCN Guidelines® with patient data overlaid to easily review, select, and document the patient information, treatment selection with NCCN supporting evidence, payor constraints, and any clinical narrative.

Facilities and Other Resources

- Describe the scientific environment in which the research will be done.
- Discuss ways in which the proposed studies will benefit from unique features of the scientific environment or from unique subject populations
- Discuss how studies will employ useful collaborative arrangements.
- If there are multiple performance sites, describe the resources available at each site.

PHS 398 Cover Page Supplement

OMB Number: 0925-0001
Expiration Date: 2/28/2023

1. Vertebrate Animals Section

Are vertebrate animals euthanized? ☐ Yes ☐ No

If "Yes" to euthanasia

Is method consistent with American Veterinary Medical Association (AVMA) guidelines? ☐ Yes ☐ No

If "No" to AVMA guidelines, describe method and provide scientific justification

2. Program Income Section

*Is program income anticipated during the periods for which the grant support is requested?

☐ Yes ☐ No

If you checked "yes" above (indicating that program income is anticipated), then use the format below to reflect the amount and source(s). Otherwise, leave this section blank.

*Budget Period	*Anticipated Amount (\$)	*Source(s)
<input type="text"/>	<input type="text"/>	<input type="text"/>

Add

3. Human Embryonic Stem Cells Section

*Does the proposed project involve human embryonic stem cells? ☐ Yes ☐ No

If the proposed project involves human embryonic stem cells, list below the registration number of the specific cell line(s) from the following list: <http://stemcells.nih.gov/research/registry/>. Or, if a specific stem cell line cannot be referenced at this time, check the box indicating that one from the registry will be used.

☐ Specific stem cell line cannot be referenced at this time. One from the registry will be used.

Cell Line(s) (Example: 0004):

Add

4. Human Fetal Tissue Section

*Does the proposed project involve human fetal tissue obtained from elective abortions? ☐ Yes ☐ No

If "yes" then provide the HFT Compliance Assurance

Add Attachment Delete Attachment View Attachment

If "yes" then provide the HFT Sample IRB Consent Form

Add Attachment Delete Attachment View Attachment

NIH Application Elements

- SF424 R&R Cover Page
- Performance Sites
- R&R Other Project Information
 - Project Summary
 - Project Narrative
 - Facilities/Other Resources
 - Other Attachments
 - SBC Registration (SBA)
- Senior/Key Personnel
- Budget
- SBIR/STTR Information
 - Commercialization Plan*
- PHS 398 Cover Page Supplement
- PHS 398 Research Plan
 - Specific Aims (1 page)
 - Research Strategy
 - Human Subjects*
 - Vertebrate Animals*

**as applicable*

PHS 398 Research Plan

- **SPECIFIC AIMS**

- 1 page – that's it!
- State concisely the goals of the proposed research
- Summarize the expected outcome(s), including the impact that the results of the proposed research will have on the research field(s) involved.
- List succinctly the specific objectives of the research proposed

Note....

- Most important part of the application
- Reviewers have to like your idea by the time they finish reading this page.
- Persuade reviewers that
 - this project is important
 - you are the right person (or team) to do it, and
 - it will advance the state of the science.

More to come!
Attend the webinar on
January 18

PHS 398 Research Plan

RESEARCH STRATEGY

- 6 pages (Ph I) or 12 pages (Ph II, FT, Direct to Ph II)
- Major part of your Research Plan
- The nuts and bolts of your application
 - Rationale for your research and the experiments you will do to accomplish each aim.
- Three main sections
 - Significance
 - Innovation
 - Approach

More to come!
Attend the webinar on
January 25

PHS 398 Research Plan

HUMAN SUBJECTS AND VERTEBRATE ANIMALS

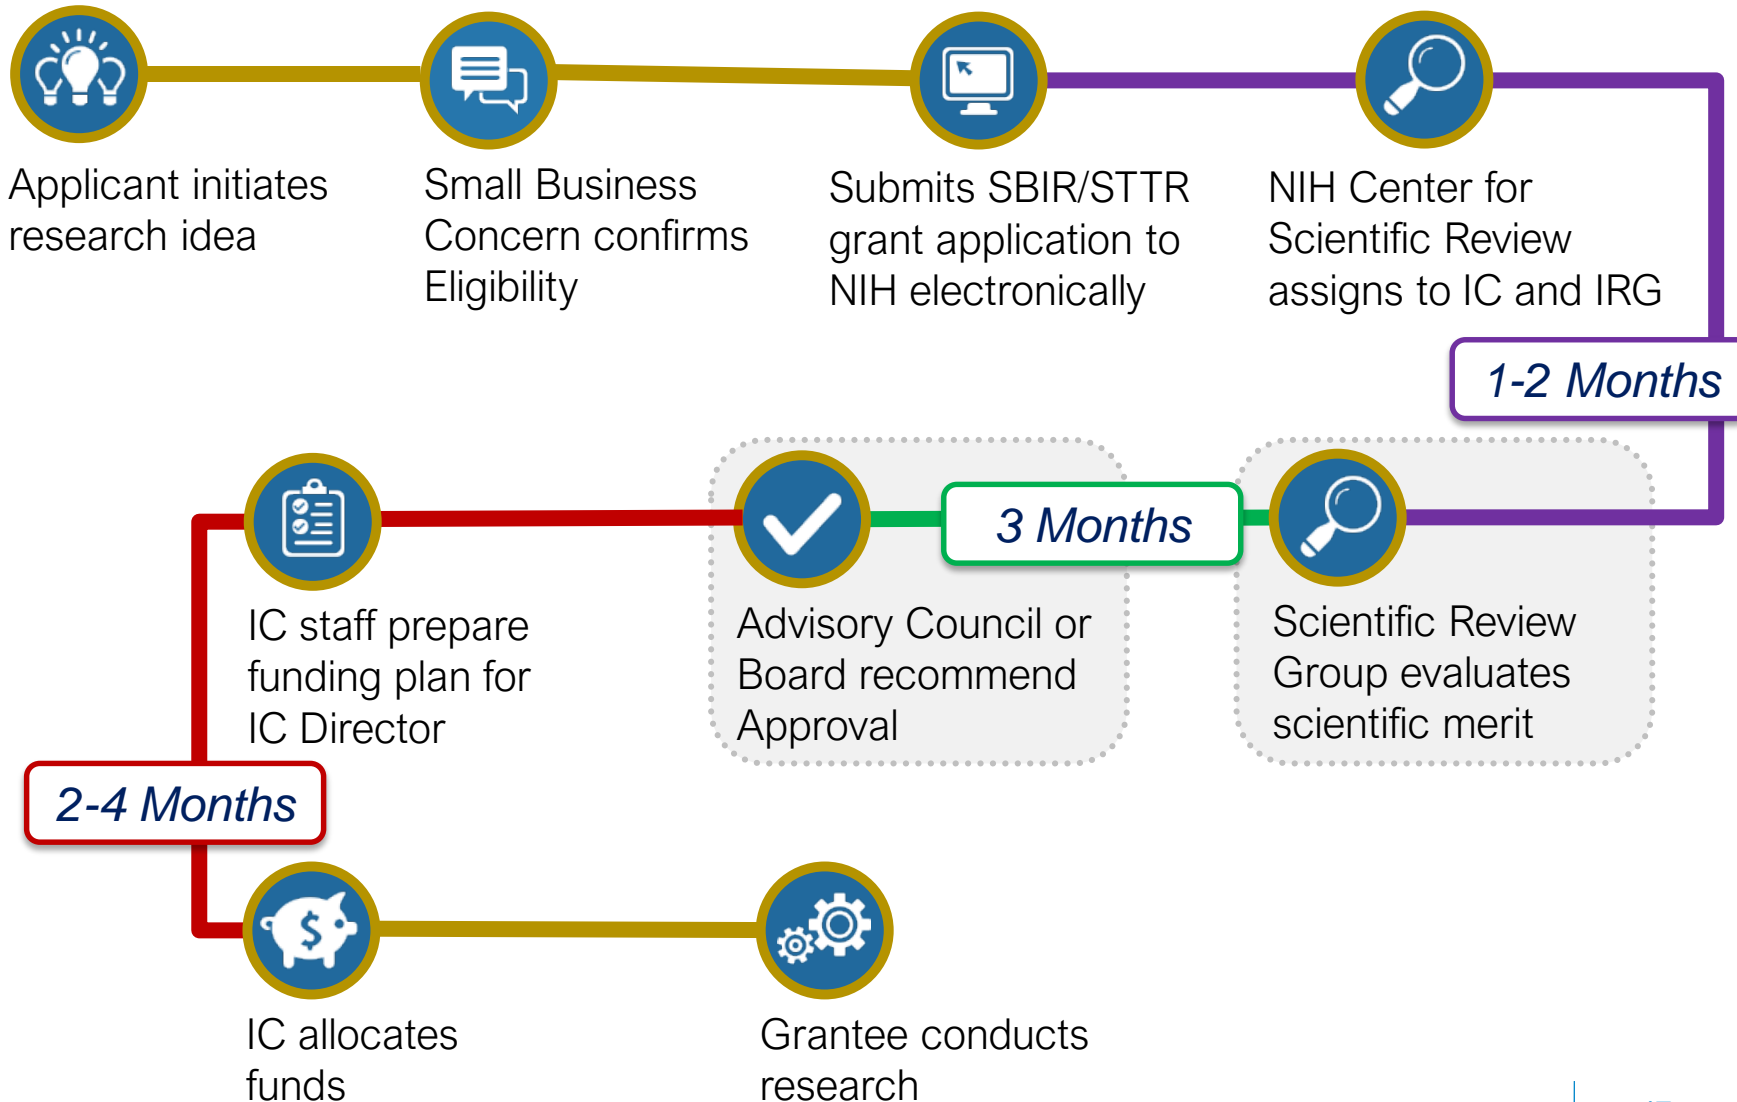

● Human Subjects

- Exempt or non-exempt research? Decision trees to help guide you
- Non-exempt: 4 key areas:
 1. Risks to Human Subjects
 2. Adequacy of Protection Against Risks
 3. Potential Benefits of the Proposed Research to Research Participants and Others
 4. Importance of the Knowledge to be Gained
- Plus more so be sure you have expertise in completing this information

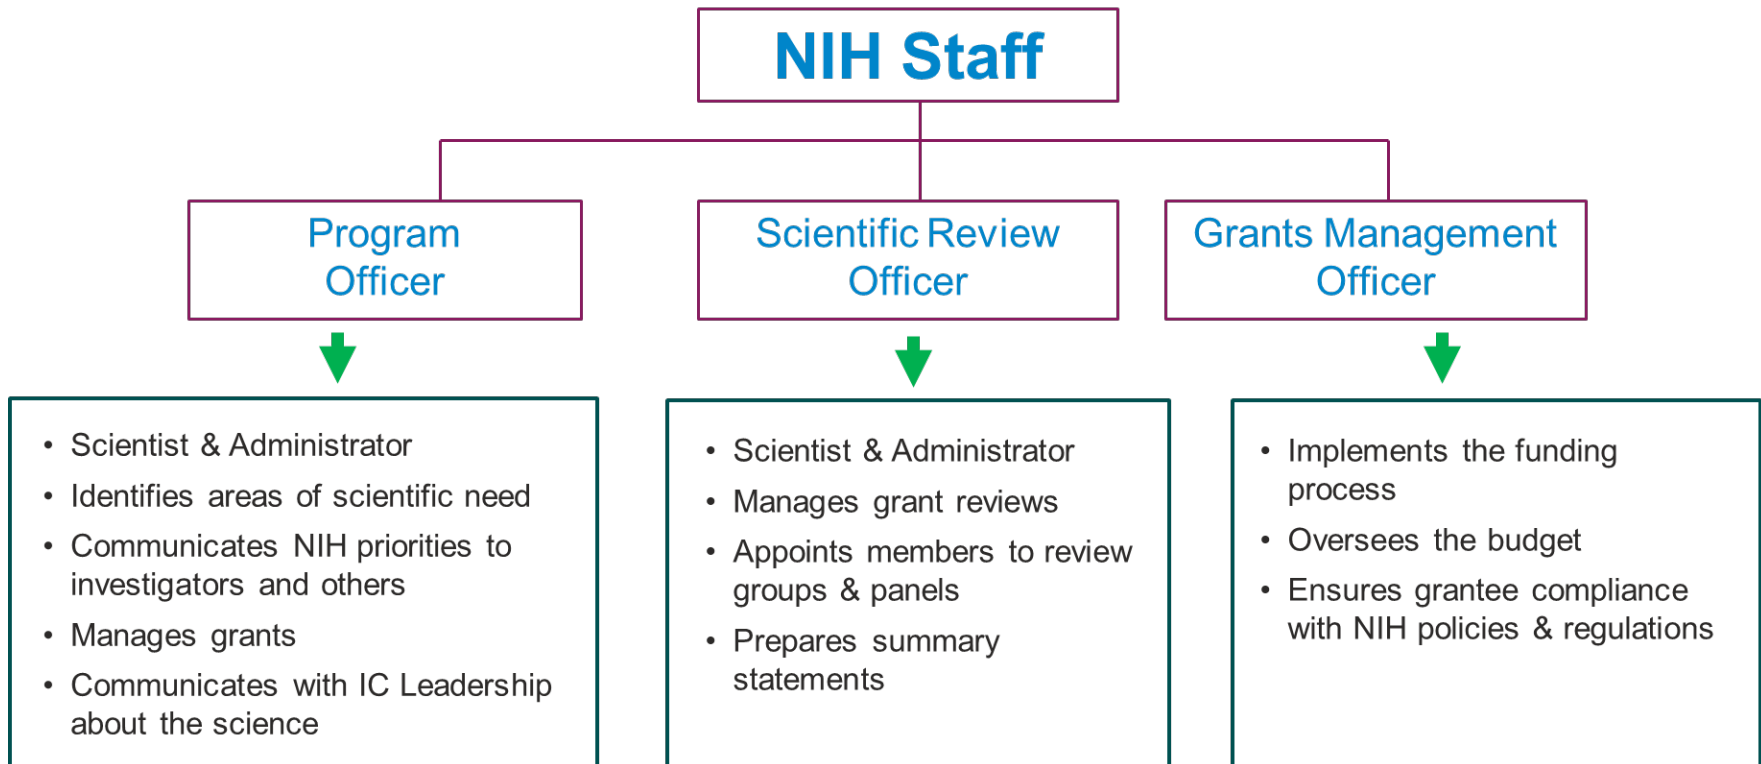

● Vertebrate Animals

- Description of Procedures
- Justification (that the species are appropriate for the proposed research.)
- Minimization of Pain and Distress
- Identify all project performance/collaborating) sites and describe the research activities with vertebrate animals that will be conducted at those sites.
- Explain when and how animals are expected to be used if plans for the use of animals have not been finalized

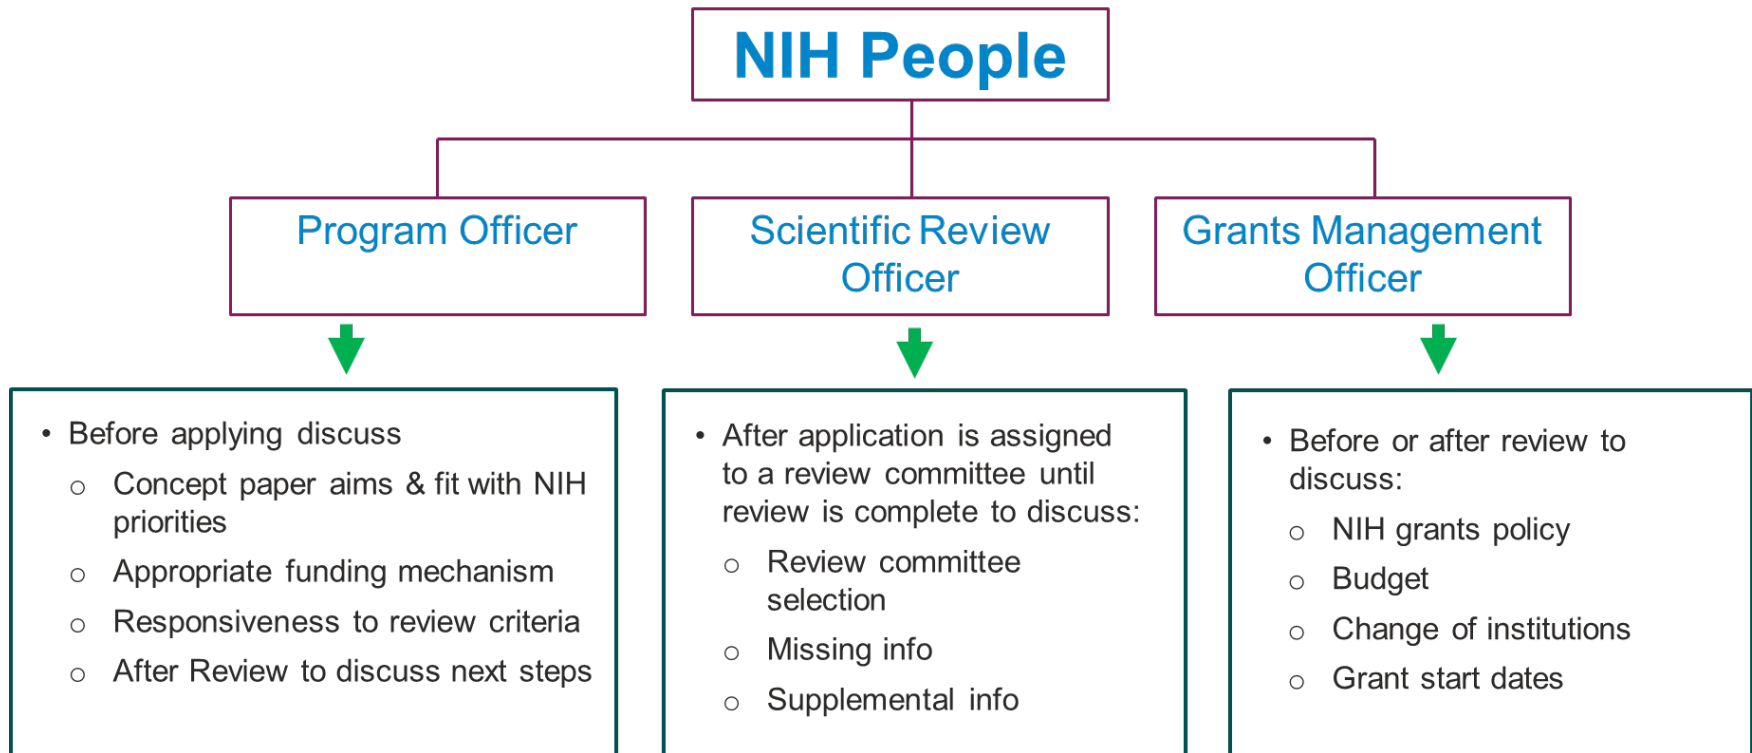

NIH Application - Review Process

Communicating with NIH is Key

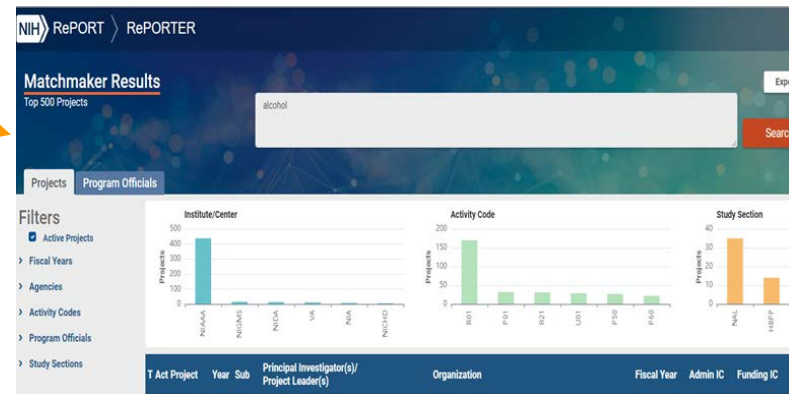

Who Should I talk to? When? And About What?

Use These Resources to Find the Right IC and PO

- Talk to mentors and colleagues
- Search NIH RePORTER for funded projects
- Search NIH MATCHMAKER for similar projects and their POs
- Review IC missions, strategic plans, & research priorities
- Review IC division or program webpages

Example: NIH RePORTER Search

● Search NIH RePORTER for funded projects

“Digital Health” SBIR/STTR
